

Reflective sheeting materials make road signs visible in the dark without having to rely on electricity.

Higher grade levels provide increased visibility of signs

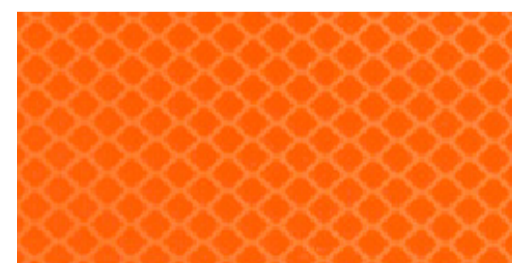

Types of Sheeting	Material	Applications
Glass Beads		
Type I Engineer Grade		Permanent highway signs, construction zone devices, and delineators.
Type II Super Engineer Grade		
Type III High Intensity Prismatic		
Microprismatic		
Type IV Metallized		Permanent highway signs, construction zone devices, and delineators.
Type V Unmetallized		Delineators
Type VI Flexible Vinyl		Roll-up Signs Traffic Cone Collars Post Bands
Diamond Grade Microprismatic		
Type VII Unmetallized		Permanent highway signs, construction zone devices, and delineators.
Type VIII Unmetallized		
Type IX Unmetallized		

Engineer Grade
500 feet

High Intensity Prismatic
1000 feet

Diamond Grade
1500 feet

3 most common grade categories for safety products and nighttime visibility.
