

# SANDBAGGER GF2

**Model:** GF2 Gravity Fed 2-Chute

## System Components Include:

- Sandbag filling machine to include two (2) filling stations
- Safety Ladder
- Spill-over Shield
- Protected by United States Patents

**Description:** This automated sandbag filling system is used to fill two (2) sandbags simultaneously. It requires two (2) people to fill sandbags and one (1) person to operate the front-end loader to keep the hopper full. The gravity fed model will fill 400-500 bags per hour depending on the material and manpower.

The operator simply presses a foot pedal to activate the flow of sand into the bag and releases the foot pedal to stop the flow. This equipment is self-contained, lightweight, and transportable in a pickup truck bed. A ladder is provided to manually probe the material in the hopper when necessary. An optional towing package is available.
