

SANDBAGGER M2

Model: MA Motorized Auger Model II

System Components Include:

- Sandbag filling machine to include four (4) filling stations
- Safety Grid
- Spill-over Shield
- Auger and Agitator
- Gas Engine
- Hydraulic Motor
- Protected by United States Patents

Description: This automated sandbag filling system is used to fill four (4) sandbags simultaneously. It requires four (4) people to fill sandbags and one (1) person to operate the front-end loader to keep the two (2) cubic yard hopper full.

This unit is capable of filling at least 1600 bags per hour using unskilled labor. It is also lightweight and truck-portable. This Sandbagger is equipped with a hydraulic driven bi-directional auger and agitator to keep wet materials flowing. An optional towing package is available.
